

CLAIMS

We claim:

1. A dispensing device for using a flow of water during a toilet flush to dispense toilet bowl treatment preparations into a toilet bowl, the device comprising:
 - a bottle for holding a liquid;
 - a base for holding the bottle;
 - a wicking device supported by the base, the wicking device being suitable to convey the liquid from the bottle to a dispensing position within the flow of water during a toilet flush;
 - a container holding a dissolvable product, the container being configured to permit water from the flow of water to enter the container during a toilet flush, and the container including an opening configured to permit a mixture comprising water and dissolved product to be released from the container into the toilet bowl; and
 - suspension means for suspending the base from a rim of the toilet bowl.
2. The dispensing device of claim 1, wherein the liquid comprises a surfactant.
3. The dispensing device of claim 1, wherein the liquid comprises a fragrance.
4. The dispensing device of claim 1, wherein the dissolvable product includes a bleaching agent or a chlorine releasing agent.

5. A dispensing device for using a flow of water during a toilet flush to dispense toilet bowl treatment preparations into a toilet bowl, the device comprising:

a bottle for holding a liquid, the bottle having a mouth and a closure for covering the mouth;

a base for holding the bottle, the base having a piercing post, the piercing post being suitable for opening the closure of the bottle;

a wicking device supported by the base, the wicking device being suitable to convey the liquid from the piercing post to a dispensing position within the flow of water during a toilet flush;

a container holding a dissolvable product, the container being configured to permit water from the flow of water to enter the container during a toilet flush, the container including a dispensing conduit configured to permit a mixture comprising water and dissolved product to be released from the container into the toilet bowl, the dispensing conduit being dimensioned such that a portion of the mixture is released into the toilet bowl after the toilet flush is complete; and

suspension means for suspending the base from a rim of the toilet bowl, wherein the dissolvable product comprises a solid including at least one component that is incompatible with at least one component of the liquid.

6. The dispensing device of claim 5, wherein the liquid comprises a surfactant.

7. The dispensing device of claim 5, wherein the liquid comprises a fragrance.

8. The dispensing device of claim 5, wherein the dissolvable product includes a bleaching agent or a chlorine releasing agent.
